NexaTech Cloud Operations Runbook

Department: Engineering | Document type: Operations Runbook

Fictional training content for a document-based RAG learning project.

1. Deployment

Deployments are performed through the approved CI/CD pipeline. Production changes require a successful test run and an approved change record

2. Backups

The production database is backed up every 24 hours. Backup restoration is tested quarterly. Backup status is monitored by the Operations team

3. Monitoring

The on-call engineer monitors service availability, error rate, latency, and storage capacity

4. Disaster recovery

The fictional recovery time objective is 4 hours and the recovery point objective is 24 hours. These targets must be validated during recovery exercises
