NexaTech Product Atlas Manual

Department: Engineering | Document type: Product Manual

Fictional training content for a document-based RAG learning project.

1. Overview

Atlas is a fictional internal knowledge platform. It supports document search, team workspaces, and role-based access control

2. Installation

The standard deployment requires a supported Linux host, a database service, persistent storage, and outbound access to the configured model endpoint

3. Troubleshooting

If search returns no results, verify that the document ingestion job completed, the index contains records, and the query uses the correct workspace

4. Service limits

The training edition supports a maximum of 100 concurrent user sessions and a 25 MB upload limit per file. These are fictional example limits
